

## **NEW VERSATILE HYBRID ADHESIVE GENIOSIL® N 550**

Silicone is extremely versatile: its properties include resistance to high and low temperatures, UV and weathering resistance, high elasticity and good adhesive properties.

GENIOSIL® N 550 is a novel hybrid adhesive. This high-quality, permanently flexible adhesive and sealant based on silane-modified polymers now combines well-known silicone properties with totally new ones such as paintability.

Since GENIOSIL® N 550 does not produce any vapors either, it can be coated with appropriate paints either in a cured state or by a wet-on-wet process. A further plus is that its ready adhesion makes the use of primers unnecessary in most applications. By using our new hybrid adhesive, metals, plastics, wood and other materials can be bonded together and sealed.

Typical uses include metal-panel bonding and seam seals in the automotive and shipbuilding sectors, in caravan, railcar and bus construction, mechanical and electrical engineering, as well as in household goods.

DRAWIN distributes GENIOSIL® N 550 a novel development of WACKER SILICONES in 310 ml cartridges and 20 kg pails. Further information about GENIOSIL® N 550 can be obtained from the flyer „WACKER SILICONES – GENIOSIL – PAINTABLE HYBRID ADHESIVES AND SEALANTS“, which is available from our download center as a PDF file. Please feel free to ask your Customer Service Representative about GENIOSIL® N 550.
